

Fencing Project

Palmetto Middle School decided to use cacti for their fencing project on their 48 feet long and 24 feet wide football field.

- How many cacti would they need if they plant one cactus every 4 yards starting with the first cactus being planted on corner A?
- How tall (in feet) would a cactus get in a year if it grows 3 inches every 3 months?
- Do you feel that cacti are the right plant to use for a fancy fencing project?
- Draw your dream cactus and display it to your teacher.
